Datatechnician

# Structured datatechnician graduate looking for full-stack work

Can you use a structured, independent and creative colleague?

With an education in backend and an interest in frontend, I can offer 5½ years of experience in full-stack development. Although I am particularly effective in languages such as C#, Typescript and Javascript in technologies such as React, ASP.NET and EntityFramework, I am very interested in learning new languages and technologies.

I'm a big fan of generic code, use of the DRY concept, and have a great interest in making code that is smart and easy to maintain. In addition, I have an eye for detail and user-friendliness, so that I can give the user the best experience.

# Who am I?

I'm an INFJ type, which means I'm introverted, intuitive, feeling and judging. Even though I enjoy sitting by myself and doing my tasks with music in my ears, I'm not afraid to collaborate with others or take responsibility for a feature. I'm structured and I like to plan my tasks and keep track of my deadlines. I enjoy communicating, brainstorming and helping my colleagues, and enjoy developing innovative solutions together.

Outside of work, I enjoy playing Genshin Impact or Overwatch with my friends, making electronic music and editing videos. My hobbies help to strengthen my creativity, self-reflection and adaptability.

# What can I offer?

I can offer a colleague who is effective, structured, open to new technologies and systems and has an eye for detail. I like to plan my tasks and keep track of my deadlines, as I feel that it gives me motivation to work and show that I am making a good effort. Although I have become comfortable in my current technologies and languages, I am still interested in learning something new. I'm a detail-oriented type who has an eye for even the smallest details and user-friendliness, so the user gets the best experience.

I can save you time in training in programs like Visual Studio, Visual Studio Code, SQL Server Management Studio, Figma and draw.io. These programs were used during my education, where I also took the initiative to learn Figma and draw.io, both of which are tools in connection with starting projects (mindmap and wireframes).

During my education, I have been taught SCRUM and have experience working in an agile environment in Azure DevOps. In addition, I have good experience using git for version control and project management.

I hope you will consider my application and I look forward to hearing from you.

Best regards

Daniel Simonsen
